

Quantel Australia

- Formed in 1990 in Hobart
- Designed embedded controllers for the University of Tasmania
- In 1993, created the Gatekeeper system.

Quantel Australia

- Have been working on Gatekeeper for seven years.
- Needed a partner to fully realise the product – partnered with Lockwood in 1996.
- 1998 – Lockwood acquired by Assa Abloy – Australian projects halted or terminated.

Gatekeeper

- What is Gatekeeper?
 - Advanced, scalable networked security product
 - 100% new design
 - Many innovative features
- Encompasses
 - Access control
 - Building automation
 - Digital video
 - Voice over IP

Architecture

- Gatekeeper Sentry
 - Gatekeeper Sentry is central supervisor
 - May be cabinet mounted or deployed in the field
 - Powerful 32-bit processor with 16Mb memory

Architecture

- Access Control and Automation
 - Tiny MPU controllers called “nodes”
 - Different nodes for different functions
 - ERK: Keypad / LCD / universal reader
 - ENG: 4 inputs 1 relay output
 - ENP: Intelligent 240v power outlet control
 - ENL: Intelligent light switch control
 - Nodes may be daisy chained together
 - Very cheap to build, can mix different types
 - “Plug and play” – no manual configuration
 - Hot Pluggable – plug in while the system is on
 - Digital tamper protection

Architecture

- Expansion
 - Can daisy chain up to 20 nodes per port
 - Sentry has four ports
 - Each node can have four inputs and one output
 - Limit is 320 inputs and 80 outputs
 - How to expand beyond this?

Architecture

- Security Module Bay
 - SMB's are rack mounted with the sentry
 - Each SMB supports 20 nodes including cable management posts
 - Can interconnect up to 5 SMB's together per sentry port.
 - 1 sentry x 4 ports x 5 SMB's per port x 20 nodes per SMB = 1600 inputs and 400 outputs per sentry.
 - Or 400 doors; or 400 managed power outlets; or 400 light switches –any combination that does not exceed the maximum.

Integration

- How is access control and automation integrated?
 - Nodes of different types can be intermixed; some nodes handle access control while others manage power outlets, lighting and other services.
 - Flexible scripting system can handle most scenarios
 - High powered processor and flexible node system allows realisation of digital video and voice over IP (VoIP).

Migration Path

- Small Sites

- Single sentry
- Up to 320 inputs, 80 outputs / doors / readers
- Configured using keypad...

Sentry LCD

...or text console

View	Edit	Zones	Users	Devices	Triggers	Scripts
			View Users			
Number	Name		New User..	ion	Status	Zone

000002	King-Siem, Ge		New Group..		ASTE	1-4,
000003	Morris, Tim				ASTE	12

Text Console

Migration Path

- Medium Sites
 - Multiple Gatekeeper Sentries
 - Add-in module provides Ethernet over any media (UTP, fiber, coax).
 - Configuration via keypad or world wide web
 - Limit remains at up to 320 inputs and up to 80 outputs (less readers)

Migration Path

- Large Sites
 - Many Gatekeeper Sentries
 - Enhanced hardware management with SMB's
 - Encourages structured installations
 - Web-based Java management software
 - When fully expanded supports up to 1600 inputs and 400 outputs

Features

- What does Gatekeeper do that other systems already do?
 - Basic access control
 - Card & code; dual user access; visitor/escort
 - Guard patrol
 - Anti-passback and nested anti-passback
 - Occupancy counting

Features

- What does Gatekeeper do that is new?
 - RJ-45 and CAT-5 standard cabling supported on all interconnects
 - “Hot pluggable” – nodes can be inserted while the system is running.
 - “Plug and play” – Gatekeeper detects a new device when it is plugged in, identifies it, and asks how you want it configured using wizards.
 - Templates – makes configuring standard security products like sensors and door locks very easy

Features

- What does Gatekeeper do better?
 - Flash memory upgrades can easily be done in the field
 - Keypad configuration is performed with easy to use menus
 - Much easier to install and maintain – RJ-45 connections take seconds to install
 - Screw terminals are also supported for installers more comfortable with this technology

Completion Status

Complete

- Gatekeeper Sentry
- Gatekeeper Ethernet network module
- Security Module Bay
- I/O node, reader node, power management node, light switch management node, Wigand interface
- Firmware
- Dialler module
- Web server

Concept

Networking

- Connectivity

- All system interconnects are RJ-45
- Communications protocol is TCP/IP
- Network protocol is native Ethernet with 64 pipelined transmit/receive buffers and DMA

Gatekeeper Ethernet Technology

Standard Ethernet provides economical high speed network services

Gatekeeper Ethernet Interfaces

UTP Ethernet is standard on all sentries

UTP via AUI

Fiber via AUI

Coax via AUI

Transceiver

Transceiver

Transceiver

UTP

AUI

AUI

AUI

UTP

AUI

AUI

Each Gatekeeper sentry has up to two Ethernet Interfaces for link redundancy configuration

Advantages of Ethernet

Extremely fast - 10mbps/100mbps
Full Duplex Operation
Supports AUI and UTP
Totally Isolation Connection

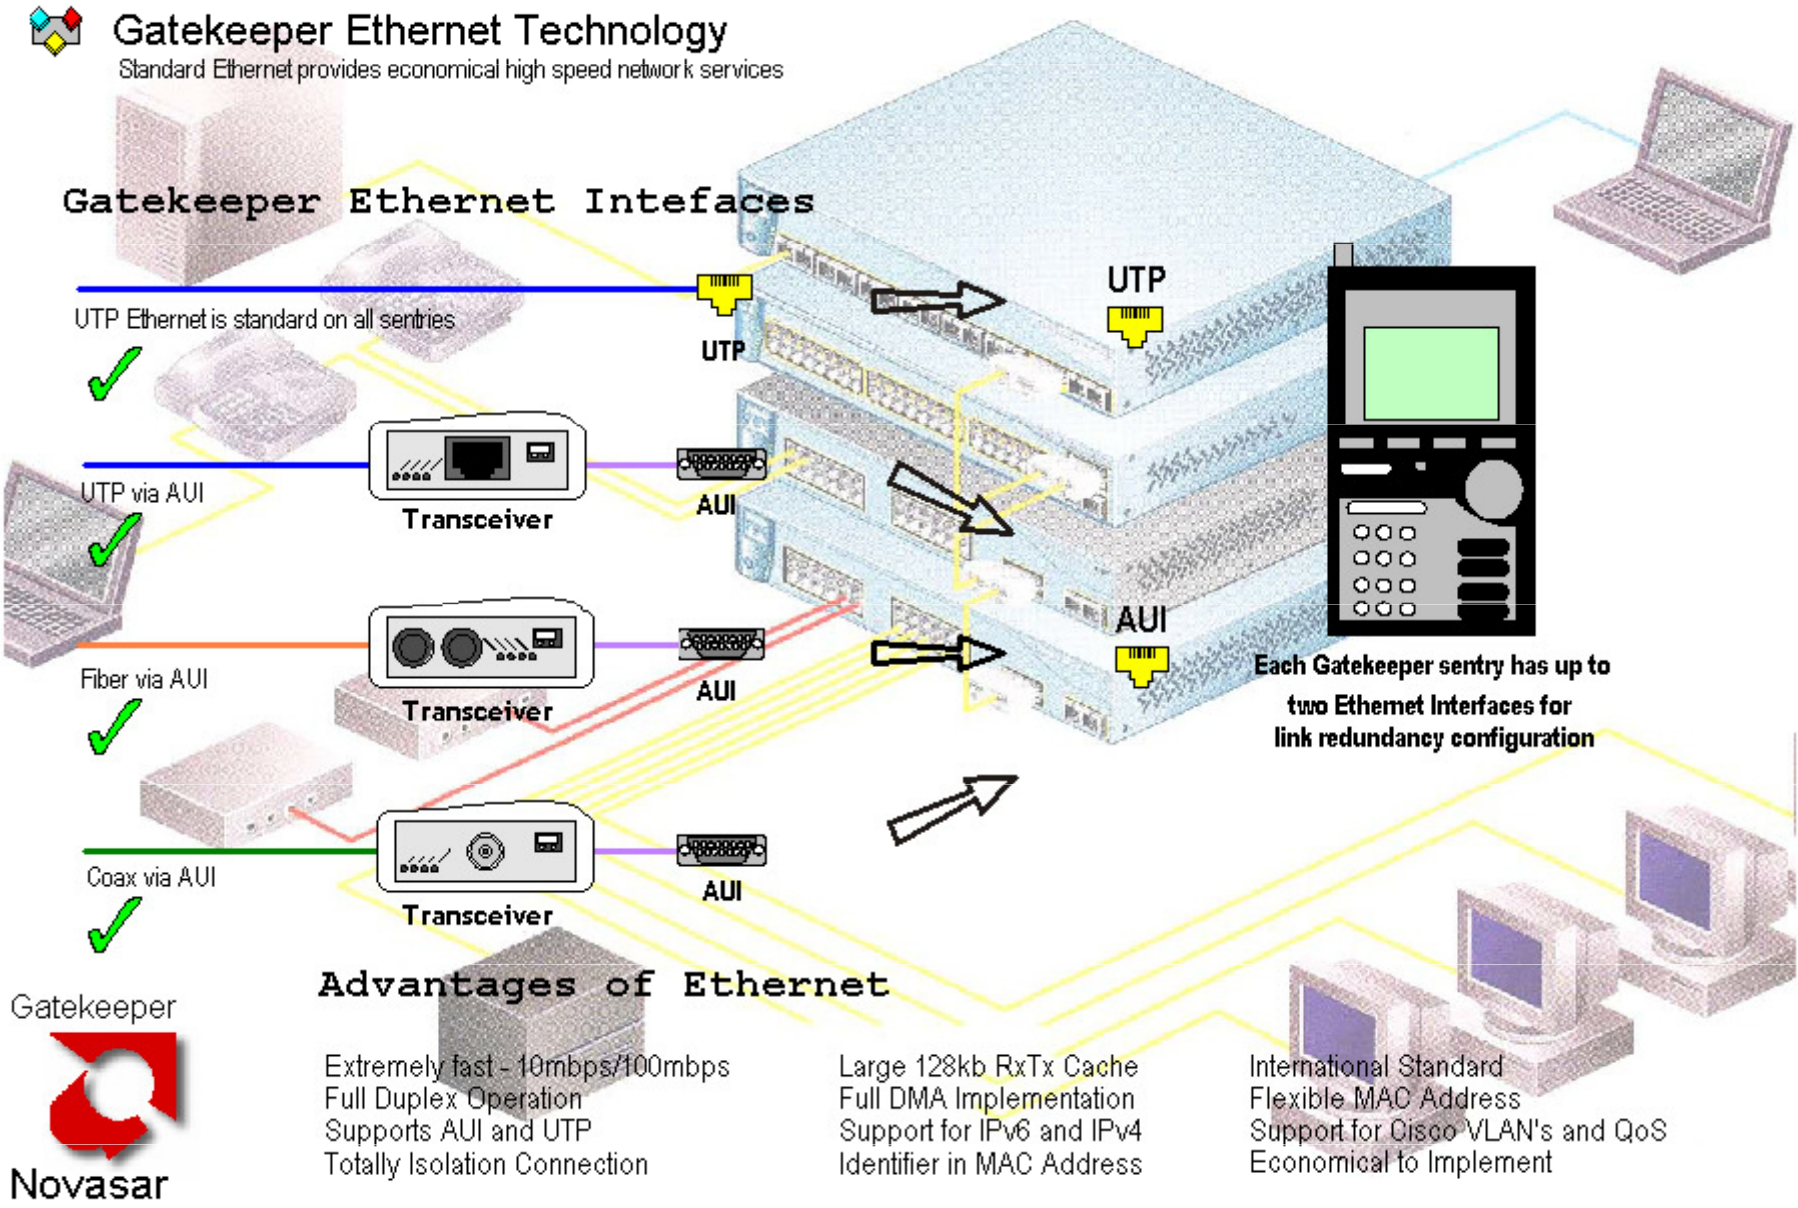

Large 128kb RxTx Cache
Full DMA Implementation
Support for IPv6 and IPv4
Identifier in MAC Address

International Standard
Flexible MAC Address
Support for Cisco VLAN's and QoS
Economical to Implement

Gatekeeper

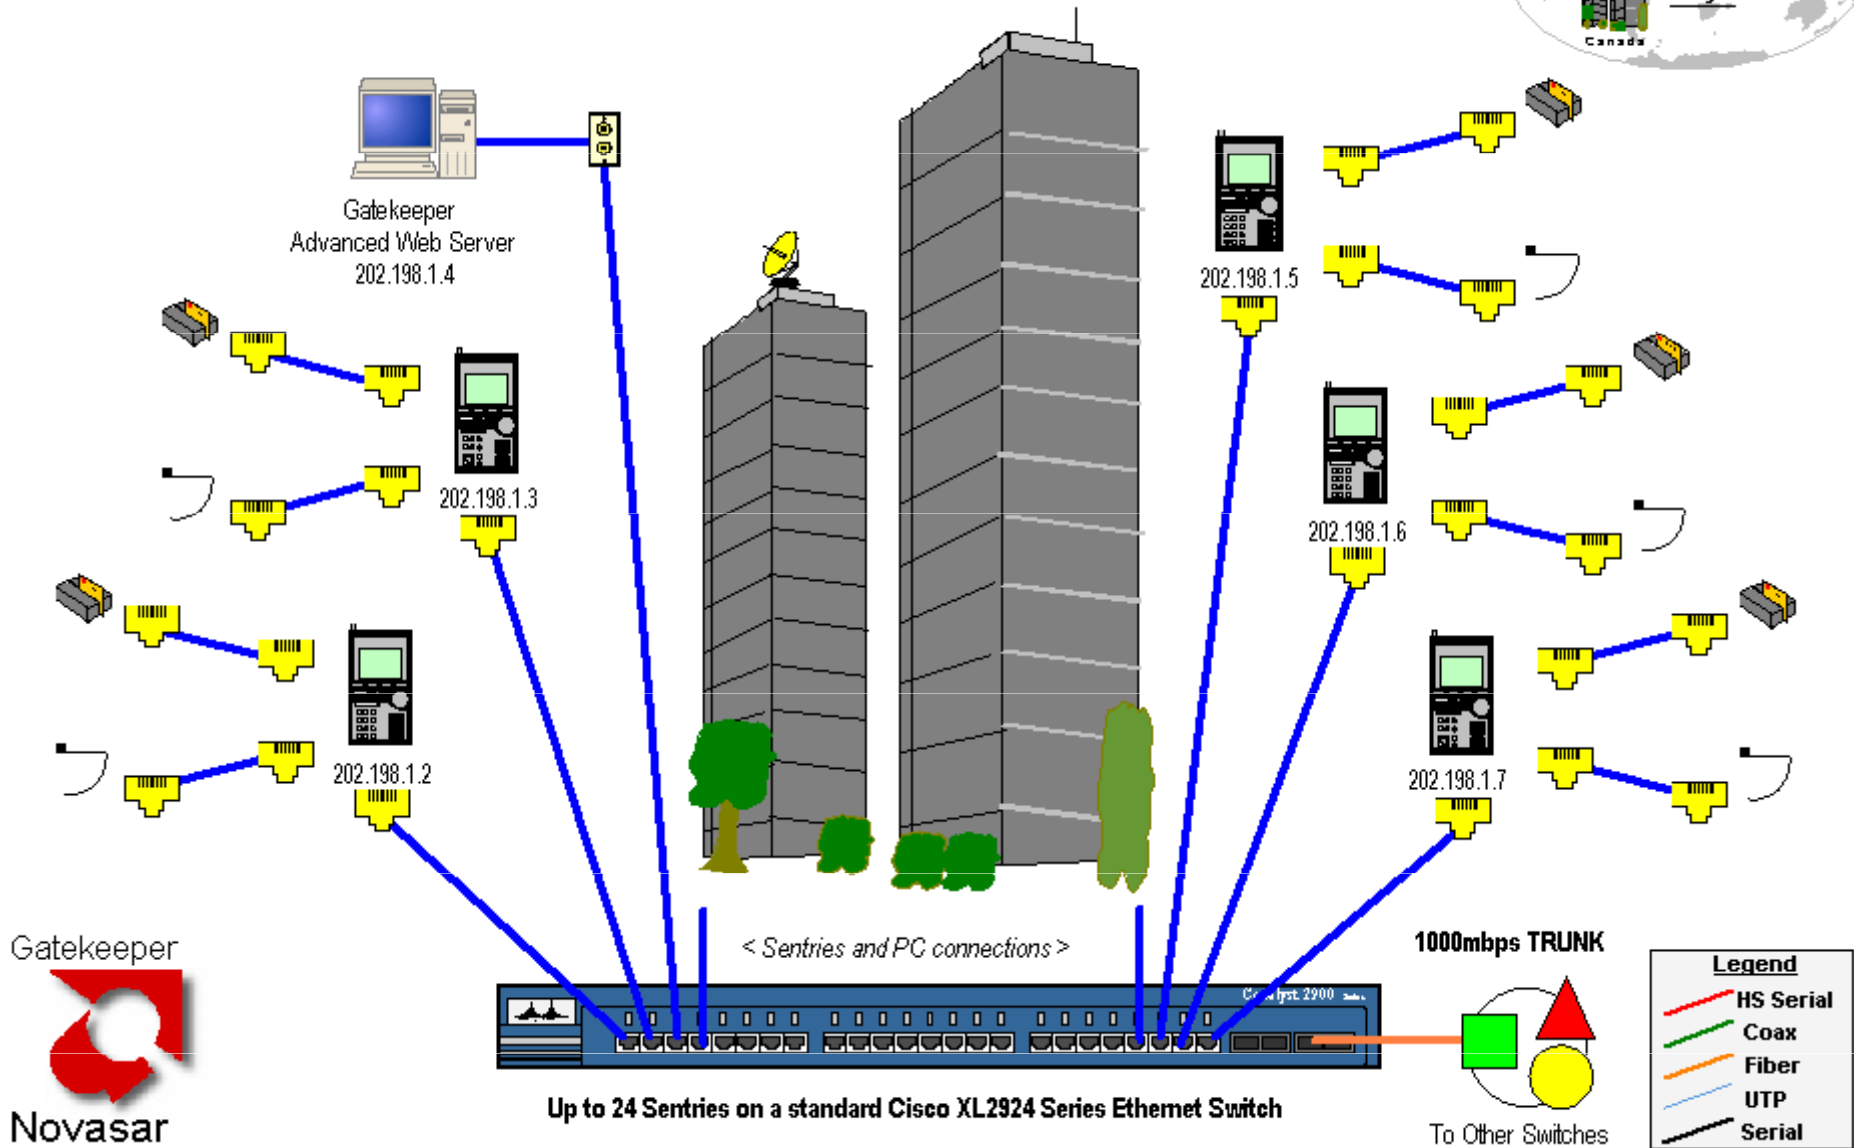

Novasar

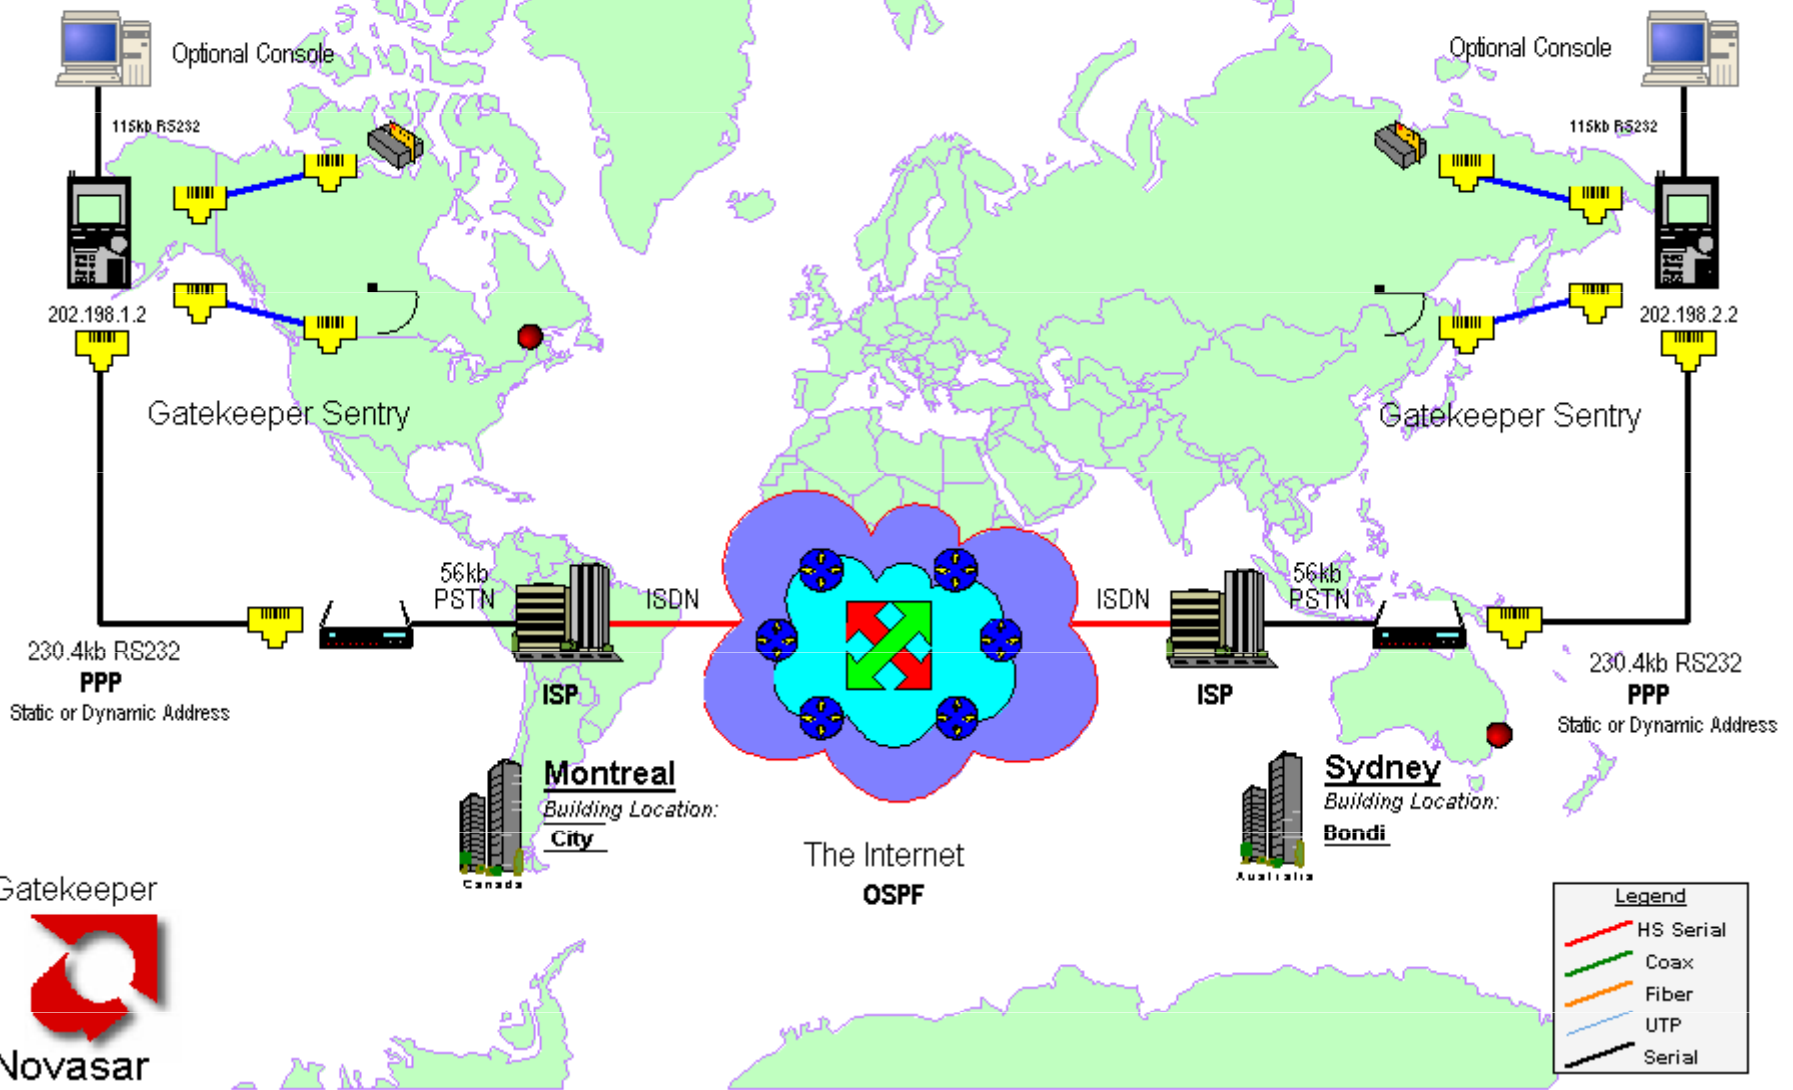

Internal Network - Many Sentries to Many Sentries

Standard UTP 10mbps/100mbps high speed Ethernet configuration with VLAN support and 1000mbps trunk.

Low Speed Remote Link - Sentry to Sentry

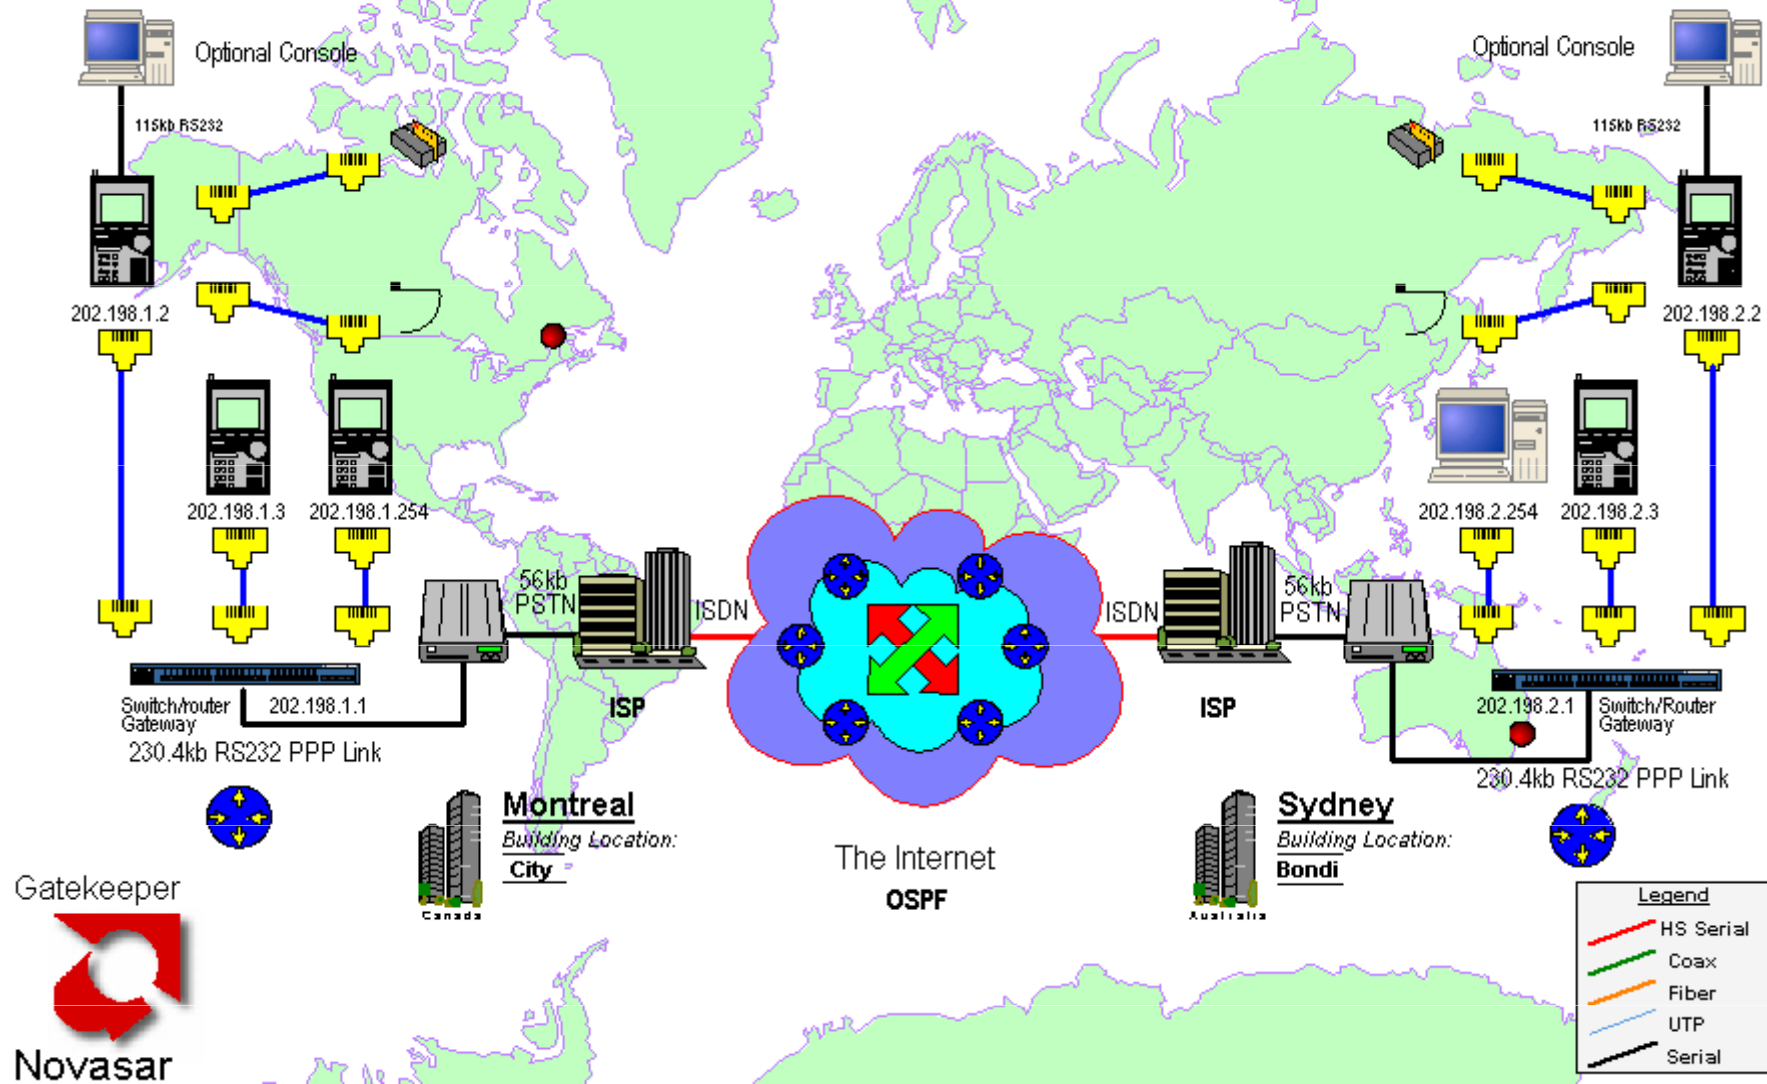

Point-to-Point dialup PPP Connection via Internet Service Provider (ISP)

Low Speed Remote Link - Many Sentries to Many Sentries

Point-to-Point dialup PPP Connection via Internet Service Provider (ISP)

Build Costs

- Gatekeeper Sentry
 - ~\$250 for parts, excluding labour and enclosure
- Gatekeeper Nodes
 - Vary from ~\$10 to ~\$40 each

Summary

- Single sentry can support 80 nodes. Each node can be a reader, a managed power point, a managed light switch or 4 inputs / 1 output.
- With SMB's, this is expanded to 400 nodes.
- Clear migration path from small to large sites – no hardware is wasted.
- System has been designed to make installation and maintenance easy.
- Can be configured using keypad, text console, or web.
- TCP/IP, Ethernet, CAT-5 and structured cabling.

Thank You.
